APPLICATION // INTEGRATION DEVELOPER (CEMI)

Cornell University // Information Technology

Dear Hiring Committee,

I am applying for the **Integration Developer (CEMI)** position. I am a mathematician and software engineer with four years at Siemens Energy building and maintaining data extraction and pricing tools, and I live in Vestal, which means I can be on the Ithaca campus whenever the work calls for it.

At Siemens Energy I develop AI-powered data extraction tools in Python and Snowflake SQL, and I own those tools through their full lifecycle: requirements, build, test, deploy, and the maintenance after. Every line goes into GitLab under version control, and my responsibility is that what ships is tested and maintainable. That is integration work in everything but the platform. Pulling data from one system, transforming it against requirements, and landing it where the business can use it is the core of this role, and it is what I do now.

I should be direct about the gap: I have not worked with **Boomi** specifically. What I bring instead is the underlying skill the role is built on, which is translating functional requirements into technical solutions, plus Python, SQL, and the testing discipline that comes from building tools people depend on daily. I pick up platforms quickly. Reading a requirement and asking what it actually claims before writing any code is the harder habit, and I already have it.

The mission alignment matters to me as much as the technical fit. I spent two years as president of Alfred University's LGBTQ+ Alliance, and Cornell's commitment to a culture of belonging across a community this diverse is the kind of environment where I do my best work. I am comfortable across technical and non-technical audiences, I work well independently and on a team, and I would give a two-year appointment the same care I would give a permanent one.

I am eligible for remote work within the United States. I am local to the Ithaca area, and while I do not currently have reliable transportation for frequent travel, I can and will make the trip for scheduled meetings, training, and onboarding. Within my first months here I intend to invest in a vehicle, which would make regular campus presence straightforward.

Sincerely,

Lilith Athena
